

Hostinger Deployment & QA Checklist

Architecture

- React production build deployed as the frontend.
- Node.js API deployed through Hostinger's supported Node application/reverse-proxy setup.
- PostgreSQL production database configured.
- Frontend API base URL is an environment variable.
- HTTPS is enabled.

Authentication

- ☐ Login works.
- ☐ MD/AM forced password change works.
- ☐ MD/AM second-device login is rejected.
- ☐ Logout/revoke works.
- ☐ No tokens/passwords appear in logs.
- ☐ Cross-origin CORS/cookie behavior is verified in production if frontend/API are on different origins.

Authorization

- ☐ Associate cannot access another associate's sensitive fields.
- ☐ Associate cannot access parent/sibling bookings.
- ☐ Downline visibility works.
- ☐ Direct ID/URL manipulation returns 403/404 as appropriate.
- ☐ MD/AM approval permissions are enforced server-side.

UI

- ☐ Desktop sidebar aligns correctly.
- ☐ Tablet collapsed sidebar works.
- ☐ Mobile has no desktop sidebar strip.
- ☐ Mobile drawer open/close does not alter main layout incorrectly.
- ☐ Bottom navigation works.
- ☐ No horizontal overflow.
- ☐ Forms use 44px+ controls.
- ☐ Loading/empty/error/success states exist.

PWA

- ☐ Manifest valid.
- ☐ Icons valid.
- ☐ Standalone display.
- ☐ Service worker registered.
- ☐ Install App appears only when meaningful.

- ☐ Installed state is not faked.
- ☐ Installed app and browser share the same data.

Business Workflows

- ☐ Associate creation/referral/approval.
- ☐ Project approval and verified badge.
- ☐ Inventory availability.
- ☐ Booking verification and double-booking prevention.
- ☐ Commission calculations.
- ☐ Travel approval/payment.
- ☐ Site visit lifecycle.
- ☐ Offer scheduling.
- ☐ Carousel upload/reorder/schedule.
- ☐ First-visit popup.
- ☐ Immutable reviews.
- ☐ Notifications.
- ☐ FAQ/tutorials.

Final Commands

Use the actual project scripts discovered in Phase 0. Typical checks are:

- npm run lint
- npm run typecheck
- npm test
- npm run build
- npm run dev / npm run start

Do not assume script names; inspect package.json first.
