

1. Overall Portal Structure

Main navigation

The portal should have:

1. 🏠 Dashboard
2. 🏗️ Projects
3. 📅 Bookings
4. 💰 Commissions

5. 👤 Team
6. 📺 Offers
7. ⌚ Pending Requests
8. 🚗 Travel Allowance
9. 📍 Site Visits
10. 🔔 Notifications
11. ★ Reviews
12. 👤 My Profile
13. ❓ FAQ
14. 🎓 Tutorials

On desktop, use a **left sidebar + top header**.

On mobile, use:

- Bottom navigation for the most important sections
- Hamburger menu for secondary sections
- Floating notification indicator

2. First-Visit Offer Popup

This is an important requirement.

Whenever the portal opens, the AM-controlled primary offer should appear as a **full-screen promotional modal**.

Example

AM controls:

- Image/banner
- Heading
- Description
- Project
- Offer validity
- CTA
- Active/inactive
- Display order

There should be an **X Close** button.

3. Login & Security Architecture

There are three roles:

MD

Highest authority.

Associate Manager

Operational administrator.

Associate

Partner/sales user.

MD and AM accounts

These should be **pre-created fixed accounts**.

For example:

User ID

Temporary Password

Role

Account Status

Last Login
Active Device

On first login:

Welcome

For security, you must change your temporary password.

Current Password
New Password
Confirm New Password

[Change Password]

The temporary password should become invalid after successful password change.

4. One-Device Login

Your requirement is important because MD and AM have highly sensitive permissions.

For MD and AM:

Only one active device/session.

Example:

MD Account
↓
Login from Laptop
↓
Device registered
↓
Login from Mobile
↓
BLOCKED

Show:

"This account is already active on another device. Please log out from the existing device before signing in here."

The profile should also have:

Active Device

Device: Windows PC
Browser: Chrome
Last Active: Today, 2:32 PM

[Sign Out This Device]

For extra security, I recommend making **MD and AM unable to simultaneously maintain multiple sessions.**

Associates can have normal multi-device access unless you later decide otherwise.

5. ROLE 1 — MD

The MD is the final authority.

MD Dashboard

The dashboard should show:

Associates	Teams	Bookings	Commission	
248	52	386	₹XX,XX,XXX	

Pending Approvals

- 12 Associate Requests
 - 4 Travel Requests
 - 3 Project Approvals
 - 5 Other Requests
-

MD capabilities

Associates

MD can see:

- All associates
- Associate code
- Name
- Manager
- Team
- Status
- Commission
- Bookings
- Reviews
- Performance

But sensitive information should only appear where necessary.

Team hierarchy

The MD should be able to visualize:

Associate A

This can become a **Team Tree View**.

6. MD Approval Engine

The MD should have a centralized:

Pending Approvals

Categories:

- New Associate
- Add Team Member
- Remove Team Member
- Project Approval
- Travel Allowance
- Commission Change
- Other administrative requests

Each request should contain:

Request Type

Requested By

Date

Reason

Supporting Information

Status

[Approve] [Reject]

For rejection:

Reason for Rejection

[Submit Rejection]

This reason should be stored permanently.

7. Associate Manager

The AM is the **operational controller** of the portal.

The AM manages:

- Associates
- Projects
- Carousel
- Offers
- Associate onboarding
- Team requests
- Booking verification
- Commission configuration
- Reviews
- Content displayed in portal

But the AM **cannot override MD-controlled approvals.**

8. Associate Creation Workflow

This should be very strict.

Scenario A — AM creates associate

AM
↓
Create Associate
↓
Enter Details
↓
System generates Associate Code
↓
Save
↓
Associate account created

Scenario B — Associate refers someone

Associate X
↓
Refer New Associate
↓
Request sent to AM
↓
AM reviews
↓

AM creates associate

System generates code

Request goes to MD

MD approves

Associate activated

Therefore:

Associate cannot directly create an account.

9. Associate Code

Never allow manual editing.

Example:

ASS-0001

ASS-0002

ASS-0003

or something branded such as:

AP-00001

AP-00002

AP-00003

The code should be permanently associated with the person.

10. Associate Information Form

The AM's create-associate form should contain:

Personal Information

- Full Name
- Profile Photo
- Primary Phone
- Secondary Contact
- Emergency Contact
- WhatsApp Number
- Email
- Blood Group

Address

- Current Address
- Permanent Address

Government Information

- Aadhaar Number
- PAN Number

Banking

- Account Holder Name
- Bank Name
- Account Number
- IFSC
- Branch

Employment

- Employment Status
- Company Name
- Designation
- Work Address
- Experience

Portal Information

- Associate Code — **Auto-generated**
- Joining Date
- Referred By
- Team Parent
- Commission Type

- Commission Value
 - Status
-

11. Sensitive Data Protection

This needs to be stronger than normal UI permissions.

Associate sees

Name
Associate Code
Commission %
Team Count
Status

Associate must NOT see

- Aadhaar
- PAN
- Bank account
- IFSC
- Emergency contact
- Private address

Even if they are in the same team.

The MD/AM can access sensitive information according to their permissions.

12. Associate Dashboard

This is the most important screen because the majority of users will be associates.

It should immediately show:

Good Morning, Amruth 🙌

ASS-0024
Gold Associate

My Bookings	Commission
12	₹1,25,000

Team	Site Visits
18	7

Featured Projects
[Project Cards]

Active Offers
[Offer Cards]

Upcoming Site Visits
[Schedule]

13. Projects Module

Every project card should contain:

Project

- Project Name
- Verified Badge
- Location
- Project Type
- Project Status
- Brochure
- Layout
- Gallery
- Available/Vacant Plots
- Project Details
- Associate Offer
- Customer Offer

Example:

PROJECT IMAGE		
Green Valley Villas	✓	
 Rajahmundry		
42 Available Units		
[View Project]		

14. Project Details Page

Tabs:

Overview

Gallery

Layout

Brochure

Available Units

Offers

Available plots

Very important:

Only available inventory should be displayed to associates.

Example:

Plot 101	1800 sq.ft	AVAILABLE
Plot 102	2000 sq.ft	BOOKED

Plot 103 1500 sq.ft AVAILABLE

But the associate should see:

Plot 101

Plot 103

only.

Once booked and verified, the inventory automatically becomes unavailable inside this standalone portal.

15. Project Verification

A project approved by MD gets:

✓ **MD Verified**

Use a clear badge:

 Verified Project

Do not allow AM to manually create the verified badge.

Only MD approval should trigger it.

16. Carousel Management

AM gets a dedicated:

 **Carousel Manager**

Actions:

- Upload
- Edit
- Delete

- Activate
- Deactivate
- Reorder
- Schedule
- Preview

Fields:

Banner Image

Title

Subtitle

Project

CTA

Start Date

End Date

Status

Display Order

17. Booking Module

Associates can see:

My Bookings

and

My Team Bookings

But hierarchy permissions are critical.

Example:

You can see:

Your bookings
X's bookings
Y's bookings
Z's bookings

X can see:

X's bookings
Y's bookings

X cannot see:

Your bookings
Z's bookings

Y can see:

Y's own bookings

This is a **downward-only visibility hierarchy**.

18. Booking Form

Associate enters:

Customer Details

- Customer Name
- Phone
- Alternate Phone
- Email
- Address
- Preferred Location

Property

- Project
- Plot/Unit

- Property Type
- Size
- Price

Booking

- Booking Date
- Expected Amount
- Payment Mode
- Booking Amount
- Notes
- Documents

Then:

SUBMITTED

AM Verification

VERIFIED

Booking Confirmed

19. Booking Statuses

Use clear status symbols:

Symbol	UI Name	Meaning
	Pending	Waiting for verification
	Under Review	AM reviewing
✓	Verified	Accepted
×	Rejected	Rejected
	Payment Pending	Payment pending
	Confirmed	Booking completed

Cancelled

Cancelled

20. Commission Module

Associate sees only his own commission plus commissions generated by the visibility rules you specify.

Filters:

- Today
- This Week
- This Month
- Custom Date
- Year
- Project

Dashboard:

Total Commission

₹5,80,000

Received

₹4,25,000

Pending

₹1,55,000

Transaction table:

Date

Booking

Project

Commission

Received

Due

Status

21. Commission Configuration

AM can configure:

Commission Type

Percentage

OR

Fixed Amount

Example:

Project: Green Valley

Associate Commission:

2%

OR

₹50,000 per booking

MD should have final control/approval over commission policy changes. I recommend adding this even though you didn't explicitly require approval for every commission change because commission is financial data.

22. Team Module

The team screen should have two views:

List View

ASS-0012 Ravi

Commission: 2%

Team: 8

ASS-0045 Kumar

Commission: 3%

Team: 4

Tree View

YOU

23. Team Information Visibility

For team members:

Visible

- Name
- Associate Code
- Commission
- Status
- Team Count

Hidden

- Aadhaar
- PAN
- Bank
- Address
- Phone
- Email
- Emergency details

This is exactly the right separation.

24. Travel Allowance

Associate:

[Request Travel Allowance]

Form:

- Travel Date
- From
- To
- Purpose
- Project
- Customer
- Distance
- Travel Mode
- Amount Requested
- Supporting Bill
- Notes

Status:

Pending

↓

MD Review

↓

Approved / Rejected

↓

Paid

Associate sees only **his own** travel records.

25. Site Visits

Two sections:

My Site Visits

Team Site Visits

Information:

- Customer
- Project

- Date
- Time
- Associate
- Status
- Outcome

Statuses:

-  Scheduled
 -  On the Way
 -  Arrived
 -  Customer Met
 -  Completed
 -  Cancelled
 -  Rescheduled
-

26. Site Visit Form

Customer Name
 Customer Phone
 Project
 Visit Date
 Visit Time
 Number of Visitors
 Purpose
 Assigned Associate
 Notes
 Status

After visit:

Visit Outcome
 Customer Interest
 Property Viewed
 Follow-up Required
 Follow-up Date
 Remarks

27. Offers

Separate:

Associate Offers

What the associate personally earns.

Customer Offers

What they can show customers.

Project Offers

Offers associated with a specific project.

Achieved Offers

Shows what the associate has already earned/unlocked.

Example:

10 Bookings

Reward

₹25,000 Bonus

2 bookings remaining

28. Reviews System

This should be one of the strongest modules.

Associate creates a review request.

Step 1

Enter customer information:

- Customer Name

- Phone
- Email
- Project
- Booking
- Associate
- Date
- Interaction summary

Step 2

System generates a unique review link.

Step 3

Associate sends the link to customer.

Step 4

Customer submits:

- ★ Overall Experience
- ★ Communication
- ★ Property Experience
- ★ Associate Support

Written Review

Step 5

Review becomes permanently locked.

You specifically requested:

Reviews once given cannot be changed by anyone.

Therefore the database should treat submitted reviews as **immutable records**.

No edit button for:

- Associate
- AM

- MD

The AM/MD may only have moderation controls if you later decide that fraudulent/abusive reviews need handling.

29. Reviews & Performance

AM and MD should have analytics:

Associate
Bookings
Site Visits
Conversion
Average Rating
Total Reviews
Commission Generated
Team Performance

Example:

Ravi Kumar

★ 4.8
126 Reviews

Bookings: 42
Site Visits: 63
Conversion: 66.6%

Commission Generated:
₹18,50,000

This makes it much easier to identify high-performing associates.

30. My Profile

Associate profile:

Personal

- Photo
- Name
- Associate Code
- Phone
- WhatsApp
- Email
- Address

Verification

- ✓ Profile Verified
- ✓ Bank Verified
- ✓ Documents Verified

Financial

- Bank details
- Commission configuration

Security

- Change Password
- Login/security information
- Logout

Sensitive fields should be masked.

For example:

PAN
XXXXXX1234

Aadhaar
XXXX XXXX 4821

31. Notifications

Notification center:

Categories:

- Booking
- Project
- Commission
- Travel
- Team
- Approval
- Offer
- Site Visit
- Review
- System

Example:

✓ Booking verified for Green Valley — Plot 104.

📁 New associate offer published.

🚗 Travel allowance approved.

32. Pending Requests

This should be available to roles according to their authority.

Associate

Requests created by them:

- New associate referral
- Booking verification
- Travel allowance
- Site visit
- Other submissions

AM

Requests requiring AM action:

- Associate referrals
- Booking verification
- Associate changes

MD

Requests requiring final approval:

- New associates
 - Team changes
 - Travel allowance
 - Project approvals
 - Commission changes
 - Other critical approvals
-

33. FAQ

FAQ should have categories:

Account

Projects

Bookings

Commission

Team

Travel Allowance

Site Visits

Reviews

Offers

Security

Search:

34. Tutorials

Do not make tutorials just text.

Create a visual learning center.

Example:

 How to Create a Booking
▶ Watch Tutorial

 How to Refer an Associate
▶ Watch Tutorial

 How Commission Works
▶ Watch Tutorial

 How to Schedule a Site Visit
▶ Watch Tutorial

 How to Request Travel Allowance
▶ Watch Tutorial

AM can manage tutorials if you want the portal to remain maintainable without development changes.

35. UI Symbol System

Keep icons consistent throughout the portal.

Symbol	Name	Use
	Dashboard	Home
	Projects	Projects

	Bookings	Bookings
	Commission	Commission
	Team	Team
	Offers	Offers
	Pending	Pending requests
	Travel	Travel allowance
	Site Visit	Site visits
	Notifications	Notifications
	Reviews	Reviews
	Profile	Profile
	FAQ	Help
	Tutorials	Learning
	Verified	Approved/verified
	Secure	Security
	Download	Download
	View	View
	Edit	Edit
	Delete	Delete
	Search	Search
	Calendar	Date
	Analytics	Reports
	Settings	Configuration

For the actual production UI, use a **single professional icon library** rather than emoji. For example, use outlined SVG icons throughout and reserve badges/symbols for statuses.

36. Recommended UI Theme

Since the logo is the visual foundation, the application should extract:

- Primary logo color
- Secondary color
- Dark neutral
- Light background
- Text color
- Success
- Warning
- Error

I would avoid making the entire UI bright yellow.

Instead:

Primary brand color → buttons / active tabs / highlights

Dark → navigation / headings

White → cards

Light neutral → page background

Brand tint → selected states

This will look much more premium.

37. Responsive Design

It should be designed as a **responsive web application/PWA-style portal**, not simply a desktop website squeezed onto mobile.

Desktop

Sidebar | Main Content

Tablet

Compact Sidebar

Mobile

Header

Content

Bottom Navigation

Critical functions such as:

- Site visit
- Booking
- Customer review
- Travel request
- Notifications

should be particularly easy to use on mobile.

38. Recommended Implementation Phases

I would **not build everything simultaneously**.

Phase 1 — Foundation

Build:

- Project structure
- Database structure
- Authentication
- Role system
- MD account
- AM account
- Associate account
- Password change
- One-device security
- Session management
- Basic layout
- Responsive framework
- Theme system

Phase 2 — Associate Management

Build:

- Associate creation
 - Auto-generated code
 - Associate referral
 - AM approval workflow
 - MD approval workflow
 - Associate profile
 - Verification
 - Team hierarchy
 - Add/remove associate requests
-

Phase 3 — Projects

Build:

- Project creation
 - Project editing
 - Gallery
 - Brochure
 - Layout
 - Available plots
 - Project offers
 - Associate offers
 - MD approval
 - Verified badge
 - Project assignment
-

Phase 4 — Associate Dashboard

Build:

- Dashboard
- Project browsing
- Project details

- Offers
 - Notifications
 - Quick actions
 - Carousel
-

Phase 5 — Booking System

Build:

- Booking creation
 - Customer details
 - Project/unit selection
 - Booking verification
 - Booking statuses
 - My bookings
 - Team bookings
 - Hierarchical visibility
 - Booking analytics
-

Phase 6 — Commission

Build:

- Commission configuration
 - Percentage commission
 - Fixed commission
 - Commission ledger
 - Paid
 - Pending
 - Due
 - Date filters
 - Month/year filters
 - Project filters
-

Phase 7 — Team

Build:

- Team list
 - Team hierarchy
 - Tree view
 - Downline visibility
 - Team statistics
 - Booking visibility
 - Team count
-

Phase 8 — Travel Allowance

Build:

- Request form
 - Supporting documents
 - MD approval
 - Rejection
 - Payment records
 - History
 - Date filtering
-

Phase 9 — Site Visits

Build:

- Site visit scheduling
 - Customer information
 - Visit status
 - My visits
 - Team visits
 - Visit updates
 - Visit outcomes
-

Phase 10 — Offers & Carousel CMS

Build:

- Offer creation

- Project offers
 - Associate offers
 - Customer offers
 - Offer achievement
 - Carousel manager
 - Full-screen popup
 - Scheduling
 - Active/inactive
 - Ordering
-

Phase 11 — Reviews

Build:

- Review request
 - Customer information form
 - Unique review link
 - Customer review page
 - Star ratings
 - Written review
 - Immutable review
 - Associate rating
 - Review analytics
-

Phase 12 — Notifications

Build:

- Notification center
 - Read/unread
 - Notification categories
 - Approval notifications
 - Booking notifications
 - Commission notifications
 - Site visit notifications
 - Offer notifications
-

Phase 13 — Help Center

Build:

- FAQ
 - Search
 - Categories
 - Tutorials
 - Video/tutorial management
-

Phase 14 — Final UI/UX

Only after functionality is stable:

- Animation
 - Micro-interactions
 - Loading states
 - Empty states
 - Skeleton loaders
 - Error states
 - Confirmation dialogs
 - Mobile optimization
 - Accessibility
 - Performance optimization
 - Visual consistency
-

39. Forms Required in the Entire Portal

These are the forms I recommend implementing.

Authentication

1. Login
2. First-login password change
3. Change password
4. Session/device management

Associate Management

5. Create Associate
6. Refer Associate
7. Add Team Member Request
8. Remove Team Member Request
9. Associate Verification

Projects

10. Create Project
11. Edit Project
12. Project Gallery
13. Project Layout
14. Project Brochure
15. Project Offer
16. Associate Offer

Bookings

17. Create Booking
18. Update Booking
19. Booking Verification
20. Booking Rejection

Commission

21. Commission Configuration
22. Commission Adjustment/Approval

Travel

23. Travel Allowance Request
24. Travel Approval
25. Travel Rejection
26. Payment Update

Site Visits

27. Create Site Visit
28. Update Site Visit
29. Site Visit Outcome

Offers

30. Create Offer

- 31. Edit Offer
- 32. Offer Achievement

Reviews

- 33. Review Request
- 34. Customer Review
- 35. Review Report

Carousel

- 36. Create Carousel
- 37. Edit Carousel
- 38. Schedule Carousel

Notifications

- 39. Notification creation/configuration

Tutorials

- 40. Create Tutorial
- 41. Edit Tutorial

FAQ

- 42. Create FAQ
- 43. Edit FAQ

40. Very Important: Approval Matrix

The system should have a clear permission matrix.

Action	Associate	AM	MD
View projects	✓	✓	✓
Create project	—	✓	✓
Approve project	—	—	✓

Create associate	—	✓	✓
Refer associate	✓	✓	✓
Approve new associate	—	—	✓
Modify associate	—	✓	✓
Add team member	Request	Processes	Approve
Remove team member	Request	Processes	Approve
Configure commission	View	✓	Final authority
Request travel	✓	View	Approve
Approve travel	—	—	✓
Create booking	✓	Verify	View
Verify booking	—	✓	View
Manage carousel	—	✓	View
Manage offers	—	✓	View
Approve offers	—	—	Optional
View team	Downline	All	All
View sensitive data	Own limited	✓	✓
Manage tutorials	—	✓	✓
Manage FAQ	—	✓	✓

41. Database-Level Security

This is where I would make an important improvement.

Do **not** rely only on hiding UI buttons.

For example:

Associate A

should not be able to call the application and manually request:

Associate B's Aadhaar

Associate B's PAN

Associate B's Bank Account

The underlying authorization must prevent access.

Similarly:

Associate X

must not be able to access:

Parent's bookings

Sibling team's bookings

even by manipulating URLs or IDs.

The permissions must exist at the data-access layer.

42. Audit Trail

You didn't explicitly request this, but it is one of the **most important additions**.

Because this portal controls:

- Associates
- Bookings
- Commission
- Travel payments
- Projects
- Approvals

the system should record:

Who
What
When
Before
After
IP/session/device

Example:

MD approved travel request TA-1024
12 Aug 2026, 14:32

Or:

AM changed commission from 2% → 2.5%

This should not be editable by normal users.

43. Soft Delete Instead of Permanent Delete

I strongly recommend **not permanently deleting important records**.

For example, an associate leaving the organization should become:

Inactive

rather than disappearing from the database.

Same for:

- Bookings
- Reviews
- Projects
- Commission transactions
- Travel claims
- Team relationships

This preserves historical accuracy.

44. Better Dashboard Analytics

For MD:

Performance leaderboard

#1 Ravi	★4.9	32 bookings
#2 Kumar	★4.8	29 bookings
#3 Suresh	★4.7	25 bookings

Filters:

- Today
- Month
- Quarter
- Year
- Project

Metrics:

- Bookings
- Site visits
- Conversion
- Commission
- Reviews
- Team performance

This directly supports your requirement of identifying the best associates.

45. Add Associate Levels

I recommend adding optional levels:

	Starter
	Bronze
	Silver
	Gold
	Platinum

Level can be calculated using:

- Bookings
- Revenue
- Reviews
- Customer rating
- Active team
- Consistency

This creates motivation without exposing sensitive information.

46. Add Leaderboards

Create:

Based on:

- Monthly bookings
- Monthly commission
- Customer ratings
- Site visits
- New referrals

But allow MD/AM to enable/disable public leaderboard visibility.

47. Add Global Search

Instead of forcing users to navigate through multiple screens:

Associate can search:

- Project
- Plot
- Booking
- Team member
- Offer
- Site visit

Results must still respect role permissions.

48. Add Excellent Empty States

Don't show blank screens.

Example:

No projects assigned yet.

Your assigned projects will appear here.

[Explore Projects]

This significantly improves perceived UX.

49. Add Confirmation for Important Actions

For example:

Remove Associate?

This request will be sent to the MD
for approval.

[Cancel] [Submit Request]

For bookings:

Submit Booking?

Please verify that all customer information
is correct before submitting.

[\[Go Back\]](#) [\[Submit Booking\]](#)

50. Final Recommended Architecture

The complete portal becomes:

The most important boundaries

CRM: ❌ Not connected

EMS: ❌ Not connected

Customer Portal: ❌ Not connected

External APIs: ❌ Not required

Associate Portal: ✅ Independent

Own authentication: ✅

Own database: ✅

Own permissions: ✅

Own projects: ✅

Own bookings: ✅

Own commission records: ✅

Own team hierarchy: ✅
